

# Green Aeration

This work will be carried out on Monday  
April 2<sup>nd</sup>

**This work is important for the long-term benefit of the greens.  
Improving surface drainage, relieving compaction, creating a deeper rooting  
structure allowing for greater stress tolerance of the turf.  
It also stimulates beneficial bacteria within the soil profile and helps release  
locked up nutrients, improving colour and growth.  
All these factors are important in producing top quality playing surfaces.  
We will be using ½ inch tines going down to a depth of 10 inches.  
We apologise for any inconvenience caused.**
